

Ex.No.3 SEARCHING FOR A GIVEN NUMBER IN AN ARRAY USING 8051

AIM

To write an assembly language program to search for a number from an array of numbers

SOFTWARE USED

Keil μ vision Software

PROCEDURE

Step 1: Give a double click on μ vision 4 icon.

Step 2: To create a new project, click on the project window and select new μ vision project. Create a new folder with a project name to save the project.

Step 3: Select the target microcontroller i.e. 8051AH from Intel and click OK

Step 4: Click YES to Copy STARTUP.A51 to Project Folder and Add file to Project. Type the Assembly Language Program and save the file in the folder created with .a51 extension.

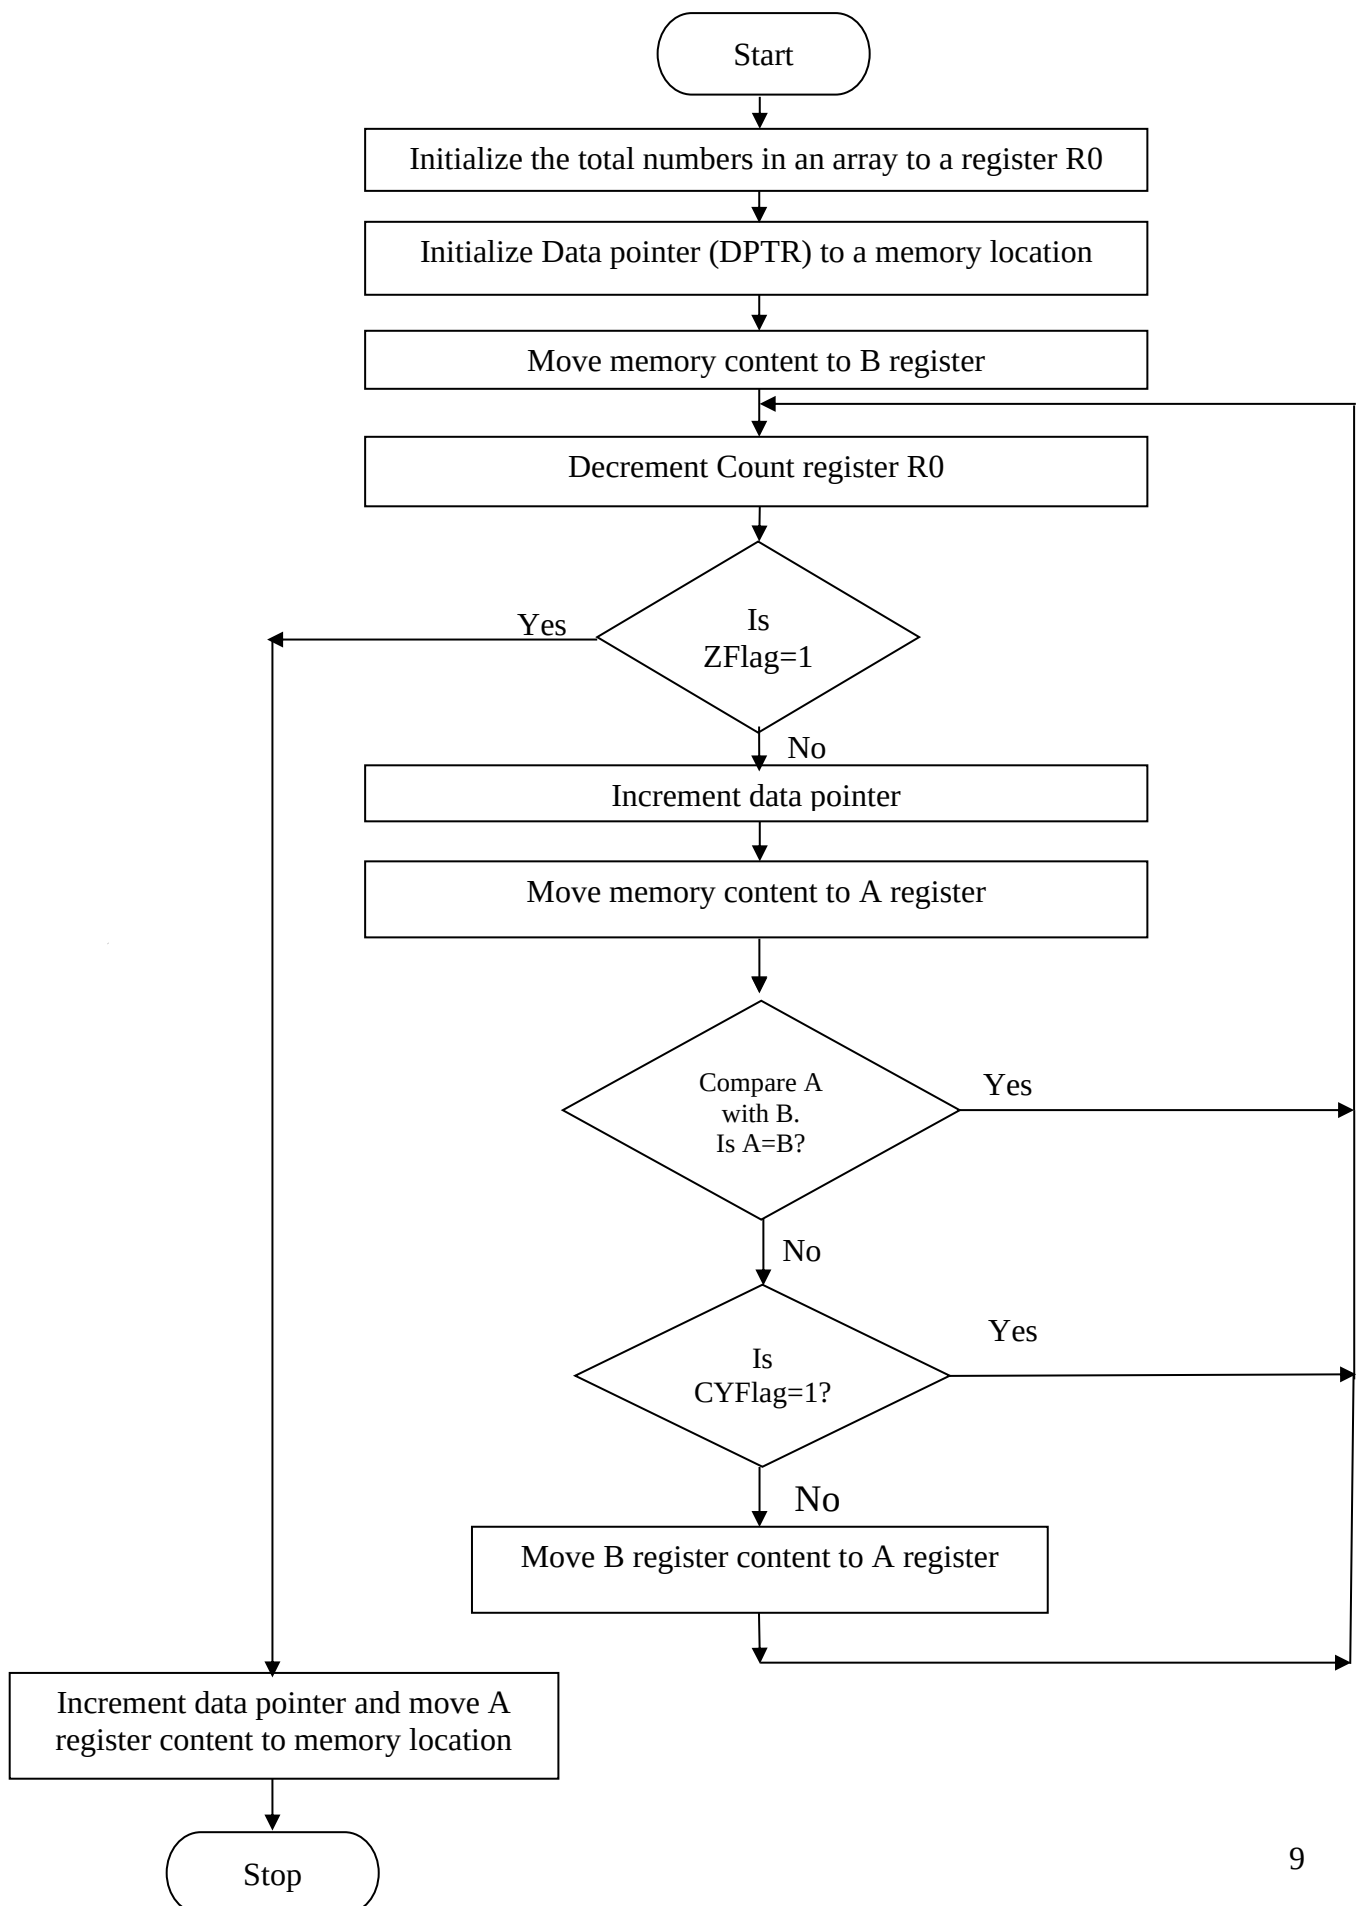

Step 5: Add the .a51 File to source group by right click on Source Group, choose “**ADD files to Group**” option.

Step 6: To compile the project, click Project and select Build Target option or press F7.

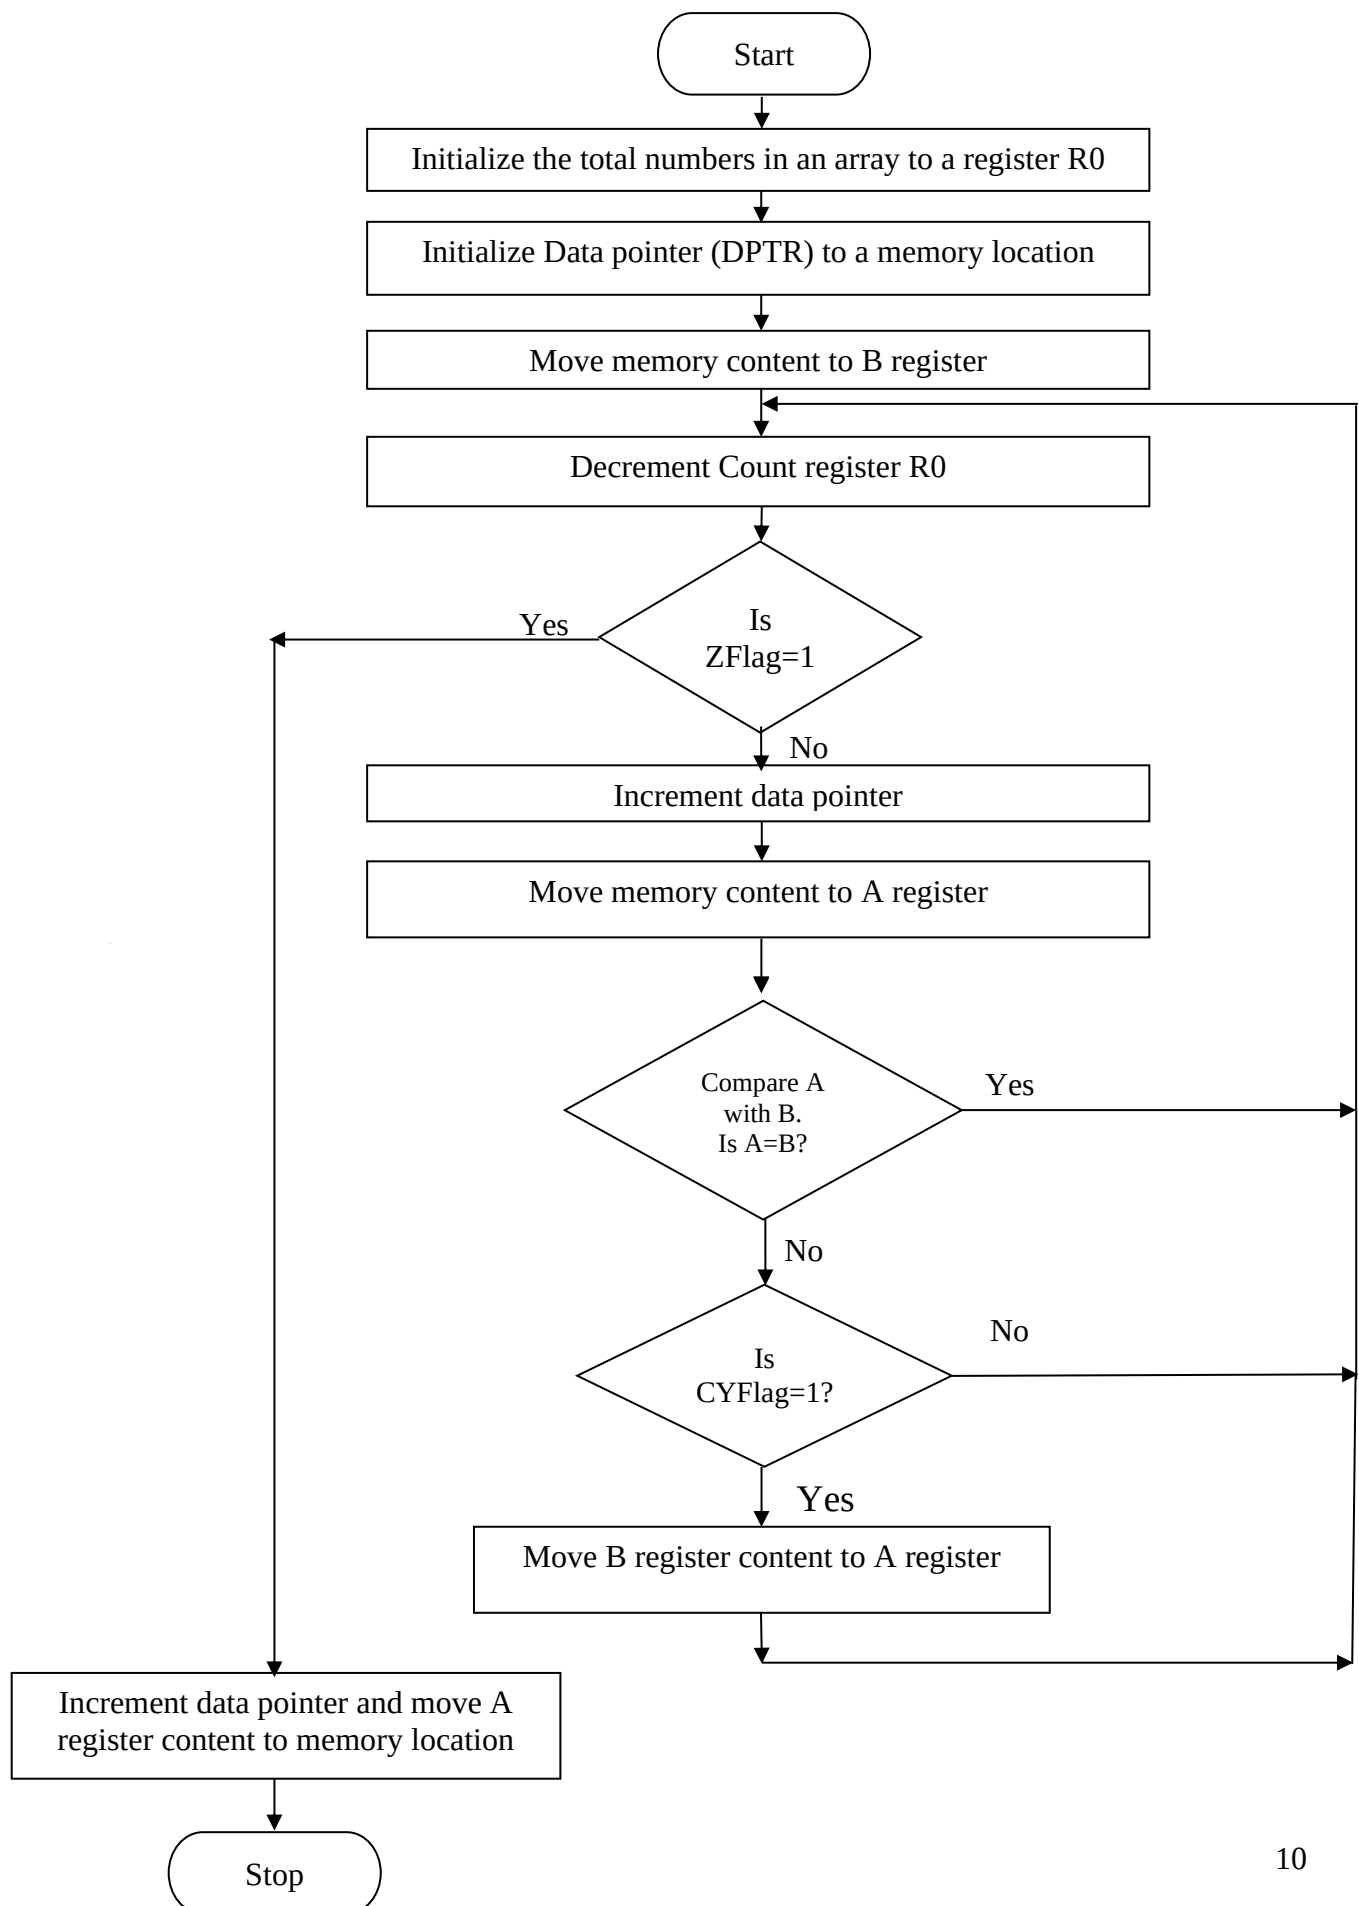

Step 7: Click debug and start the code execution.

Step 8: Click on the view window and select memory window to check the output in memory location

FLOWCHART (a)Smallest number

FLOWCHART (b)Largest number

PROGRAM

TABULATION

a) Smallest number

Input Data	Output Data

b) Largest number

Input Data	Output Data

RESULT

Thus the assembly language program to search for the smallest number and the largest number in an array has been verified.
