

AIM

To write an assembly language program to

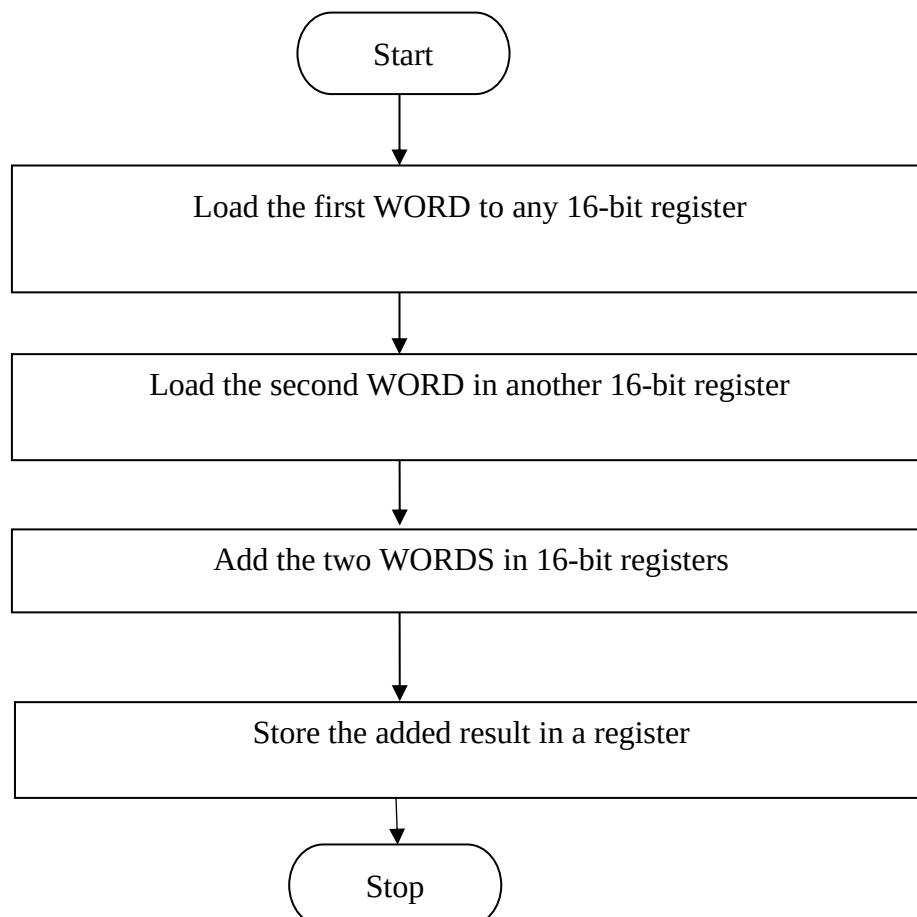

- (a) Add two 16-bit numbers
- (b) Subtract two 16-bit numbers
- (c) Multiply two 16-bit numbers
- (d) Divide word by byte (8 bit)

SOFTWARE

8086 Microprocessor online simulator software.

PROCEDURE

1. Start 8086 online simulator software and enter the program.
2. Compile the program and check for any errors in the program.
3. Enter the 16-bit input data's, compile and run the program.
4. Check the results in the specified registers

(a) TWO WORD ADDITION**FLOW CHART**

TABULATION

Input Data

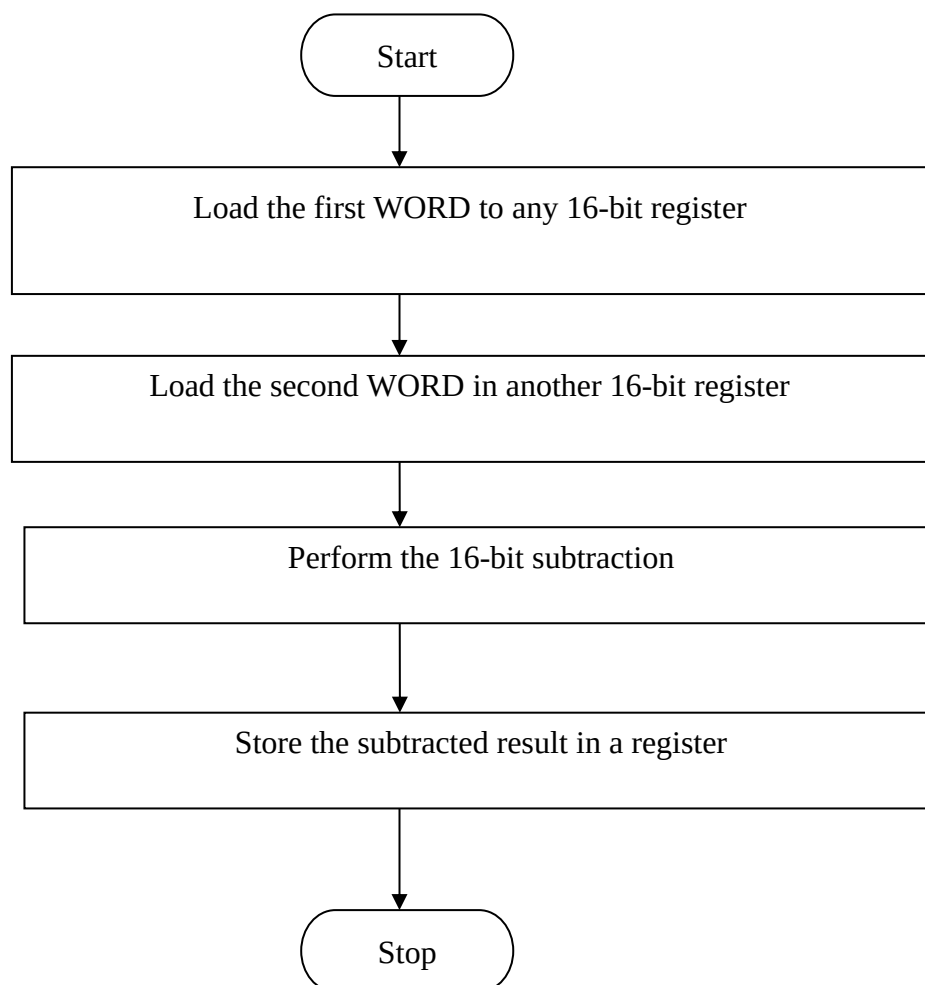

Registers		
Data1		
Registers		
Data 2		

Output data

Registers		
Data		

(b) TWO WORD SUBTRACTION

FLOW CHART

Output Data				

(d) WORD / BYTE DIVISION

FLOWCHART

TABULATION

Input data

Registers		
Data1		
Registers		
Data 2		

Output data

Registers		
Output Data		

RESULT

Thus, the arithmetic operations were performed using 8086 Microprocessor.
